EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In each of claims 1-2, and 7-16, 18, and 20, please insert the word

-- -forming --

after the word "urethane" in the first line of the claim.

In claims 7-14, please change the status identifier to currently-amended.

Applicant refers to each of their inventions as a "urethane composition" but, of course, there is no urethane present prior to the outset of the reaction between the carbinol-functional silicone and the isocyanate compound hence the Examiner believed it most appropriate that the invention be alluded to as a "urethane-forming" composition.

Allowable Subject Matter

Applicant discloses a composition comprising a polysiloxane bearing hydroxyorgano substituents and an isocyanate compound and products derived from the same. The polysiloxane reactant has numerous structural limitations attached of which the most limiting are (i) the stipulation that T units be present, and (ii) the

requirement that, where the substituents on the D units are methyl, the contribution of D units may be no more than 30 mol%.

The vast majority of prior art disclosures directed to the preparation of polyurethane that employ hydroxyalkyl-functional polysiloxanes as co-monomers teach only those urethane polymers derived from hydroxyalkyl-terminated polydiorganosiloxane, and polydimethylsiloxanes in particular. Polydiorganosiloxanes are not embraced by the description of the silicone component of the claims.

WO 03/080696 teaches a polyurethane foam derived from a polysiloxane containing hydroxyalkyl wherein it is said of the polymer macromer that it may be branched and, thus, it is indicated that "T" units may be present. However, there is no comprehensive description of this reactant and, further, the specific embodiments are all ones wherein the polysiloxane is linear and the polymer substituents are methyl groups. As such, the Examiner does not believe that this disclosure even renders obvious the claims.

Sahatjian et al., U.S. Patent Application Publication no. 2005/0010275 teaches a urethane polymer derived from silsesquioxane diols, oligomeric polyols and polyisocyanates. However the claim stipulates that the carbinol group is bonded at an "M" or "D" unit thus this reference also fails to represent a foundation for rejection.

A search for the invention by the International Search Authority yielded two references that, when combined, allegedly render obvious the claimed invention but the Examiner respectfully disagrees. Even it were true that Burns et al., U.S. Patent # 5,290,901 fairly discloses an anticipatory silicone, there is no reason why one of

ordinary skill would have been motivated to replace the polysiloxane reactant taught by U.S. Patent # 4,684,538 with that taught by Burns.

Claims 1-2, 4-5, and 7-21 are allowable. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MARC S. ZIMMER whose telephone number is (571)272-1096. The examiner can normally be reached on Monday-Friday 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
